Project ECHO Session Four
Survivorship Lifestyle Behaviors
April 11, 2024

Recording: Project ECHO Session Four_4.11.24
SURVIVORSHIP PROJECT ECHO
(Extension for Community Healthcare Outcomes)

Collaborators:
NYSDOH/NYSCCCP
SUNY Upstate (The Upstate Foundation, Inc.)
NYS Survivorship Action Team

Subject matter team leads:
Maureen Killackey M.D.
Tessa Flores, M.D.
Christina Crabtree-Ide, PhD, MPH

Funding: Centers for Disease Control and Prevention
Please type your name (first and last), health center or organization, and your email address into the Chat Box.

Please mute your line and remain on camera.

If you have a question, please type it in the Chat Box. Questions will be answered after the speakers’ presentations.

This ECHO session is being recorded and a link will be e-mailed to attendees and posted on the NYS Cancer Consortium Website (nyscancerconsortium.org)

Do NOT share any personal information about any patient.

The Session PowerPoint and materials will be sent to attendees after each ECHO Session along with the CME survey.
INTRODUCTIONS

TIMOTHY P. KORYTKO, MD
Radiation Oncologist-in-Chief, Bassett Healthcare Network

Facilitator: Christina Crabtree-Ide, PhD, MPH
Epidemiologist and Health Services Researcher and Implementation Scientist at Roswell Park Comprehensive Cancer Center

Eileen Howe Bird
Executive Director, To Life! Inc.

Eileen Howe Bird has no disclosures or conflicts to report. Dr. Korytko reports disclosures with Astra Zeneca and Alpha Tau Medical. Crabtree-Ide reports funding support from Genentech, and stock ownership of Danaher, Fortive, Vontier, and Veralto Corps.
PARTICIPANT INTRODUCTIONS

Please type your name (first and last), health center or organization, and your email address into the Chat Box.
Welcome
Survivorship ECHO Series
Session 4
Survivorship Lifestyle Behaviors

SPEAKERS
Eileen Howe Bird
Timothy P. Korytko, M.D.

Facilitator: Christina Crabtree-Ide, PhD, MPH
What is a Project ECHO?

• Collaborative, hub & spoke model of medical education and care management

• Goal is to form long-lasting partnerships between community-based provider teams and specialized providers to create bi-directional learning networks

• Increases workforce capacity to provide best-practice specialty care to patients wherever they may live; reduces health disparities

“Moving knowledge, not people”
Goals & Objectives ECHO Series

After participating in this ECHO Session, participants will be able to:
1. Understand the effect of a cancer diagnosis on mental health
2. Learn about recommended nutrition, physical activity, and lifestyle behaviors for cancer survivors
3. Identify available cancer survivorship guidelines and resources

Lifestyle and Diet in Cancer Survivorship

Tim Korytko, MD
Chief of Radiation Oncology
Bassett Healthcare Network
Cooperstown, NY
Learning Objectives

• Identify guideline based dietary patterns for cancer patients
• Identify which foods should be avoided and why
• Understand other lifestyle factors which can impact cancer risk
• Observe the dose effect and synergy between cancer risk reduction and recommendations for other chronic diseases
• Understand the dose effect of lifestyle factors in health
• Identify more resources for further learning
• (all in 20 minutes!)
Cancer Diagnosis is a potential time to intervene in general health

• A common question from patients after cancer diagnosis is “What could I have done to prevent this?” or “how can I prevent this from happening again?”

• There is significant overlap of guidelines based recommendations for cancer survivorship and guidelines based recommendations for reduction of disease burden of common conditions: DM, HTN, obesity, CAD

• I will review the guidelines in this talk and give some introductory sources to learn more information
How does lifestyle impact health?

The vast majority of cancers are not caused by heritable genetic mutations – they are caused by acquired stress to the genome.

There are significant healthcare costs associated preventable illnesses.

Pillars of Lifestyle Medicine
- Diet
- Exercise
- Sleep
- Stress
- Reduction in Harmful Substances
- Social Connection
American Cancer Society Guideline for Diet and Physical Activity for Cancer Prevention

Cheryl L. Rock, PhD, RD; Cynthia Thomson, PhD, RD; Ted Gansler, MD, MPH, MBA; Susan M. Gapstur, MPH, PhD; Marjorie L. McCullough, ScD, RD; Alpa V. Patel, PhD; Kimberly S. Andrews, BA; Elisa V. Bandera, MD, PhD; Colette Spees, PhD, MEd, RDN; Kimberly Robien, PhD, RD; Sheri Hartman, PhD; Kristen Sullivan, MPH, MS; Barbara L. Grant, MS, RD; Kathryn K. Hamilton, MS, RD; Lawrence H. Kushi, ScD; Bette J. Caan, DrPH; Debra Kibbe, MS, PHR; Jessica Donze Black, RD, MPH; Tracy L. Wiedt, MPH; Catherine McMahon, MPH; Kirsten Sloan, BA; Colleen Doyle, MS, RD

• Main Sections of this paper
  • Follow a healthy eating pattern
  • Be Physically Active
  • Avoid Alcohol
  • Maintain Healthy Body Weight
Diet and Cancer – What do the ACS Guidelines say?

- A healthy eating pattern includes:
  - Foods that are high in nutrients in amounts that help achieve and maintain a healthy body weight;
  - A variety of vegetables—dark green, red, and orange, fiber-rich legumes (beans and peas), and others;
  - Fruits, especially whole fruits with a variety of colors; and
  - Whole grains.

- A healthy eating pattern limits or does not include:
  - Red and processed meats;
  - Sugar-sweetened beverages; or
  - Highly processed foods and refined grain products.

Whole Food Plant Based Diet
How does this diet impact health?

- High nutrient density, low calorie density → weight loss
- Fiber
  - helps remove bile acids
  - Improved gut microbiome
- Phytonutrients can help reduce inflammation
- Overlaps with recommendations for HTN, CAD, DM, etc
What foods to avoid and why?

Processed foods – added sugars and highly processed foods promote obesity and poor metabolic health.

Processed meats are a known carcinogen and red meats are a probably carcinogen (WHO/IARC)

23% increased risk of CRC per 2 oz processed meat
22% increased risk of CRC per 3 oz red meat serving

In the absence of such knowledge, while recognizing that the magnitude of increased risk has some uncertainty, the ACS recommends choosing protein foods such as fish, poultry, and beans more so than red (unprocessed) meat, and, for individuals who consume processed meat products, to do so sparingly, if at all.
What about taking supplements?

• It is better to eat the foods which contain the nutrients

The USPSTF recommends against the use of beta-carotene supplements, either alone or in combination, for the prevention of cancer or cardiovascular disease. **D recommendation.**

The U.S. Preventive Services Task Force (USPSTF) concludes that the evidence is insufficient to recommend for or against the use of supplements of vitamins A, C, or E; multivitamins with folic acid; or antioxidant combinations for the prevention of cancer or cardiovascular disease. **I recommendation.**

• Some studies on supplements as cancer prevention showed increased risk of cancer
Physical Activity

- 150-300 minutes per week
- Any amount matters and it adds up

ACTIVITY CAN HELP:

- Reduce symptoms of treatment-related side effects
- Elevate mood
- Reduce anxiety and depression
- Improve sleep
- Boost energy levels and reduce fatigue
- Maintain physical functioning
- Support bone health
- Improve quality of life

https://www.aicr.org/
Avoid Alcohol

https://www.aicr.org/
Maintain a healthy body weight.

HAVING OVERWEIGHT AND OBESITY INCREASES RISK FOR 12 CANCERS

MOBILE, PHARYNX AND LARYNX CANCER
ESOPHAGEAL CANCER
POST-MENOPAUSAL BREAST CANCER
LIVER CANCER
GALLBLADDER CANCER
KIDNEY CANCER
PANCREATIC CANCER
STOMACH CANCER
OVARIAN CANCER
COLORECTAL CANCER
ENDOMETRIAL CANCER
ADVANCED PROSTATE CANCER

AND YET...

7 in 10 Americans currently have overweight or obesity.

AND...

52%

PROTECT YOURSELF!

MOVE MORE

EAT SMART

Only about half of all Americans are even aware of the obesity-cancer link.
Lifestyle Dose Effect: The more intense the lifestyle intervention, the more benefit

1. Don’t Smoke
2. BMI 18.5-24.9
3. > 30 minutes of exercise/day
4. Moderate alcohol (<1/day)
5. Healthy Diet (more: fruits, vegetables, whole grains, beans; less: sugar sweetened beverage, trans fats, red meat, processed meat)

Best Quintile in Lifestyle Score -- Lifespan is 12 years higher in men, 14 years higher in women. Best Quintile had substantial cancer risk reduction, cardiovascular risk reduction, and all cause mortality reduction (biggest reduction to cardiovascular risk)
INTENSIVE LIFESTYLE CHANGES MAY AFFECT THE PROGRESSION OF PROSTATE CANCER

Complementary or Alternative Medicine is not meant to be equivalent to oncology care

Alternative Therapy Used as Primary Treatment for Breast Cancer Negatively Impacts Outcomes

Esther Han, MD¹, Nathalie Johnson, MD, FACS², Tammy DelaMelela, MD², Margaret Glissmeyer, PA-C², and Kari Steinbock, PA-S²

¹Oregon Health & Science University, Portland, OR; ²Legacy Health System, Cancer Services, Portland, OR

ABSTRACT

Background. The use of complementary and alternative medicine (CAM) has escalated over the past decade, despite the fact that clinical studies validating the efficacy of CAM remain sparse. Clinicians frequently encounter patients who reject standard treatment, but data on outcomes of patients choosing CAM as primary treatment for breast cancer are also lacking.

Conclusions. Alternative therapies used as primary treatment for breast cancer are associated with disease progression and increased risk of recurrence and death. Diminished outcomes are more profound in those delaying/omitting surgery. Reviewing these results with our patients may help bridge the gap between CAM and standard treatments.
Lifestyle and Diet in Cancer Survivorship

• Key Take Home Messages
  • A Cancer Prevention/Survivorship diet should increase consumption of plant-based food
  • A Cancer Prevention/Survivorship should reduce processed foods, red meat and consider completely omitting processed meats.
  • There is significant synergy between a cancer risk reduction diet and lifestyle recommendations to reduce other chronic diseases
  • Exercise, reducing alcohol, not smoking, and maintaining healthy weight can impact cancer and cardiac risks in addition to diet
  • The more lifestyle recommendations are followed, or more intensely followed, the better the potential outcome.

Community Based Support for Breast Cancer Survivors
OUR STORY

- To Life! is a non-profit located in Delmar, NY with satellite wig and mastectomy product boutiques in Saratoga and Amsterdam.
- Since 1998, To Life! has been serving the Capital Region and surrounding 10 counties providing education, support, programs and services to breast cancer patients, families and caregivers.
TO LIFE! OFFERINGS

- Support Groups & Peer Mentoring
- Women’s Health and Wellness Programs
- Resources
- Boutique Fitting Services
- Breast Health Education

Boutique locations:
Delmar, Saratoga and Amsterdam

*Boutiques visits by appointment for privacy and personalized service*
CANCER SURVIVORSHIP

• An individual is considered a cancer survivor from the time of diagnosis through the rest of life. As a result, what being a survivor means to you may change over time.

• As early detection methods and cancer treatments have gotten better, the number of people who have had cancer has gone up greatly over the last 50 years in the United States. In 1971, there were 3 million people with cancer. According to the latest figures (2022), there were 18 million people living with a history of cancer in the United States.¹

¹Cancer.net/survivorship
STATISTICS:

• 12.4% of women (1 in 8) will be diagnosed with breast cancer in their lifetime (1 in 833 men).

• 81% of breast cancer is diagnosed in women aged 50+.

• In 2021, Breast cancer became the most diagnosed cancer in US women overall, and the most common cancer globally. It is the second leading cause of death among US women.

• In women under age 45, breast cancer is more common in Black women than white women in the US, and Black women are 40% more likely to die of breast cancer.

• White and Asian/Pacific Islander women are more likely to be diagnosed with localized breast cancer than Black, Hispanic, and American Indian/Alaska Native women.
RISKS FOR BREAST CANCER

• Assigned sex at birth is female
• Aging
• Previous breast cancer as well as atypical ductal hyperplasia and atypical lobular hyperplasia (ADH, ALH)
• Breast density
• Family history and first-degree relative
• Genetics
• Early menstruation onset <12 /late menopause >55
• Environmental, chemical and pesticide exposure
• Radiation exposure due to cancer treatment to chest under age 20 (i.e. Hodgkin diseases)
MORE ABOUT RISK

• **Lifestyle:**
  • Poor Diet
  • Obesity
  • Lack of Exercise
  • Smoking/Vaping
  • Alcohol

• **Later Pregnancy/No Pregnancy**
• **Not Breastfeeding**
• **Hormone Replacement Therapy**
19,160
